

Handout: Approach 1 – Perimeter + 4

The Pool Border Problem

How many square tiles does it take to build a border around a square "pool"? Find a way to know the number of tiles it will take without having to count, for any size pool.

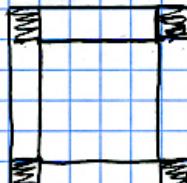

$$2 \times 4 + 4 =$$

* $P + 4 = \# \text{ tiles}$

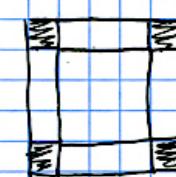

Formula

* $1 \text{ side} \times 4 + 4 = \# \text{ of tiles}$ Formula * $4l + 4 =$

$$\begin{array}{r} 4 \times 4 \text{ pool} \\ \hline 4 \times 4 + 16 + 4 = 20 \text{ tiles} \end{array}$$

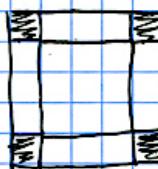

$$\begin{array}{r} 2 \times 2 \text{ pool} \\ \hline 2 \times 4 + 4 = 12 \text{ tiles} \end{array}$$

$$\begin{array}{r} 3 \times 3 \text{ pool} \\ \hline 3 \times 4 + 4 = 16 \text{ tiles} \end{array}$$

$$\begin{array}{r} 10 \times 10 \text{ pool} \\ \hline 10 \times 4 + 4 = 44 \text{ tiles} \end{array}$$

Explaining

- Interesting that area was looked at.
- Not helpful - square root - too much to solve.
- Could solve but didn't know why or how.
